

Medical Excellence

goes hand in hand with education and research. Our patients at **Women's Health at Cannon Place** have the distinct advantage of the latest technologies and other advances in obstetrical and gynecological care. This is the end product of the education and research that takes place here by the internationally recognized physicians providing patient care.

The program offers primary one on one relationships with medical care providers for routine well woman gynecological and obstetrical care. In our strong commitment to excellence, the women's health program also often utilizes a team approach. This team is made up of attending and resident physicians, nurse midwives and physicians in training. Without loss to the highly personal patient/physician relationship, our patients automatically have access to a number of brilliant and well trained medical minds to handle the most complex medical situations when necessary.

A dedicated team of nurses, genetic counselors, diagnostic sonographers, and other clinical and administrative support staff work directly with the medical care providers at **Women's Health at Cannon Place** as members of the team. All are committed to providing you with optimal care and an excellent experience.
