

# Are You Less Than 3 Months Pregnant?

---

If so, you may be eligible to participate in an important research study monitoring fetal growth being conducted through the MUSC OB/GYN department and the East Cooper Women's Center.

## Study Highlights

- Enrolled patients will undergo 6 ultrasound examinations throughout their pregnancy to follow fetal growth in the womb.
- The purpose of this study is to better understand how normal babies grow and develop inside the womb during an uncomplicated pregnancy. Developing a normal fetal growth standard will help us better identify growth abnormalities. We will also try to identify causes of growth abnormalities in normal pregnancies.
- Length of participation will vary but will not exceed 9 months.
  - Compensation is provided.
